

Project Presentation Exercise

Working with your team, develop a presentation of your project.

The presentation should include the following:

1. Identify at least three to five main tasks and deliverables for your project.
2. Identify high-level activities required to accomplish the major deliverables.
3. Identify the subtasks.
4. Determine any sub-subtasks.
5. Complete a Work Breakdown Structure (WBS) for your project, using an outline or standard format.
6. Explain any assumptions.
7. List any constraints.

Reminder: The WBS is not a sequential list of tasks.

It is simply a list of activities that must take place for the project to be completed.
